                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                       요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel fusion protein comprising a first protease inhibitor comprising an alphal-antitrypsin or its functionally active protein and a second protease inhibitor or its functionally active cutive portion and a second proteins of the invention may act as an inhibitor of protein. The fusion proteins of the invention may act as an inhibitor of protease activity. The fusion protein of the invention is useful for inhibiting protease activity associated with a disorder such as emphysema, asthma, chronic obstructive pulmonary disease, cystic fibrosis, ottis media, ottis external or HIV infection, or for treating an individual suffering from or at risk for a disease or disorder involving unwanted protease activity. The proteins are useful for treating dermatological diseases such as atopic dermatins, eczema and psoriasis, in inflammatory responses to viral infection, and for treating counds, sepsis, rheumatoid arthritis, periodontal disease, tumour metastasis and tumour angiogenesis, gastric ulceration, chronic non-healing counds, sepsis, rheumatoid arthritis, scleroderma, malaria, bacterial infection, Alzheimer's disease, hypertension and muscular dystrophy. The present sequence represents the DNA encoding the human secretory invention in the protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel fusion protein useful for inhibiting protease activity associated with a disorder such as emphysema, asthma, comprises a first protease inhibitor comprising alpha 1-antitrypsin and a second protease inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  65

                                                                                                                                                                       This invention relates to novel NOVX proteins, and the DNA sequence which encode them, having properties related to stimulation of biochemical or physiological responses in a cell, a tissue, an organ or an organism.

Compounds which modulate the proteins of the invention may have cardiant, antiarteriosclerotic, hypotensive, cytostatic, anorectic, antirheumatic, antiarteriosclerotic, hypotensive, cytostatic, anorectic, antirheumatic, immunosuppressive, anti-HIV, antinflammatory, neuroprotective, corropic, antipporfatic, antipartinsonian, antiathmatic, neuroleptic, antidepressant, antiallergic or gynaecological activities. The DNA sequences of the invention may be useful for gene therapy whilst the protein sequences of the invention may be useful for gene therapy whilst the protein sequences may allow the development of a vaccine. The protein is useful in the manufacture of a medicament for treating a syndrome of suscential and allow the development of a vaccine. The protein is cardiomyopathy, atherosclerosis, hypertension, cancer, obesity, creating or preventing NOVX-associated disorders, for example cardiomyopathy, atherosclerosis, hypertension, cancer, obesity, cheumaton, multiple sclerosis, hypertension, allergies or cardiomyopathy, atherosclerosis, hypertension, depression, allergies or fertility disorders, and inchromosome mapping, trisue typing, preventive medicine, and pharmacogenomics. The present sequence is the cDNA sequence which encodes the human NOVX27C protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ProGlyLysCysProValThrTyrGlyGlnCysLeuMetLeuAsnProProAsnPheCys 105

The present invention describes a DNA sequence (A) encoding an analogue of a mammalian serine protease inhibitor (B). The DNA sequences and recombinant methods allow manufacture of a class of inhibitors of e.g. recombinant methods allow manufacture of a class of inhibitors of e.g. cathepsin G, elastase, and trypsin, with different specificities. The recombinant serine protease product can be directed to act intractulularly or extracellularly and is useful in treating conditions caused by a disturbance in the native protease/protease inhibitor balance such as emphysema, arthritis, glomerulonephritis, peridontitis, muscular dystrophy, tumour invasion, sepsis, and acute leukemia. (A) allows (B) to be recombinantly produced in sufficient quantities and purities so as to provide economical pharmaceutical compositions. (B) is resistent to heat, acid, and a variety of proteolytic enzymes, is thermodynamically stable in extracellular conditions, and extibits a high degree of self assembly forming an active tertiary structure in the absence of blochemical criming an active tertiary structure in the absence of blochemical direct manufacture of recombinant serine protease inhibitors. (Updated on direct manufacture of recombinant serine protease inhibitors. (Updated on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New DNA sequence encoding mammalian serine protease inhibitor - useful for recombinantly producing inhibitors with different specificities and treating diseases such as emphysema, arthritis, muscular dystrophy, and tumor invasion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protease inhibitor; human; emphysema; arthritis; peridontitis; r dystrophy; tumour invasion; glomerulonephritis; sepsis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Serine protease inhibitor direct manufacturing DNA sequence (SLPI).

as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. RP1-30012 is from the library RPC1-1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           6104. .6223 _ _ _ forte="Alusg/x repeat: matches 174. .298 of consensus" 7809. .8022 /note="Charlie2 repeat: matches 3505. .3724 of consensus" /note="Charlie2 repeat: matches 3505. .3724 of consensus"

Submitted (19-MAR-2001) Sanger Centre, Hinxton, Cambridgeshire,
CB10 18A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
requestes: clonerequest@sanger.ac.uk

On Nov 29, 2000 this sequence version replaced gi:10198630.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.

The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em.; EMBL; Sw.; SWISSPOT; Tr.; TREMBL; Wp.; WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
thromosome 20, constructed by the Sanger Centre Chromosome 20
Mapping Group. Further information can be found at

IMPORTANT: This sequence is not the entire insert of clone
RPI-30012 It may be shorter because we sequence overlapping
sections only once, except for a 100 base overlap.
The true left end of clone RPI-172120 is at 100 in this sequence.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (1.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HS30012 63796 bp DNA linear PRI 07-APR-2001 Human DNA sequence from clone RR1-30012 on chromosome 20q12-13.12 Contains ESTs, GSSs and STSs. Contains part of a novel gene and the SLPI gene for secretory leukocyte protease inhibitor
